

Presentation Requirements

Each group will have at most **8 minutes** to present their work. It is NOT necessary to use the full time.

You will need to prepare **simple slides** for your presentation.

Slides Content

For saving time, please keep your slides simple and concise.

You may include the following information in your slides:

Introduction to your design

Describe the working flow of your work, and any important components, for instance:

- Classes you add
- Data structure
- Your header (if you extend the standard header)
- TCP timeout related determination, implementation and behavior
- Other content related to RDT implementation.
- Other important parts
- ...

Congestion Control check

- Show your **cwnd record plot**, and describe your plot (when are slow start, congestion avoidance, packet loss... or any other congestion control algorithms you implemented).

Concurrency check

- Show your **concurrency visualization plot** (automatically generated after running concurrency test).

Crash check

- Generate and show a concurrency plot after running crash test by:

```
python3 test/concurrency_visualizer.py logs/peer1.log
```

Optimize check (If Any)

- Discuss what you have done to optimize the performance of your code.
- Show evidence (if applicable). **Just for example:**
 - If you implement **fast recovery**, you should show us a different cwnd plot.
 - If you implement **SR**, show us your corresponding peer log.

Contribution Rate

If your contributions **are not equally distributed**, mark the ratio of your contributions in your slides.

Note

Our goal is assess your progress, so please be honest about your implementation. Claiming features that are not actually functional will be considered cheating.

Others

Time registration

Register your presentation time in the online form (see Blackboard announcement). Try to select separately to avoid situations where there are too many people at a particular time.

Attendance

All group members are required to be present unless there are special circumstances. If you have a valid reason for absence, please explain it to the instructor and follow the formal leave application process.

Submission

After your presentation, you should submit your presentation slides (as a PowerPoint or PDF (preferred) file) like `gxx_pre.pdf`. (xx is your group id).

Contribution Calculation

Your individual score will be calculated by

$$s_i = \min(S(1 + 1.1(w_i - \frac{1}{N})), 120)$$

where s_i is the i th member's score, S is your group raw points, w_i is the i -th member's contribution rate, N is the number of students in your team. Note that $\sum w_i = 1$
